ACNE

What is ACNE ?

A skin condition characterized by red pimples on the skin, especially on the face, due to inflamed or infected sebaceous glands and prevalent chiefly among adolescents. Acne is a condition that is highly distressing - not because it is dangerous but because of its impact on a person's facial appearance. Although the pimples themselves may disappear with the right treatment.

Acne Occur on

Face | Neck | Chest | Back | Shoulder | Upper Arms

What Causes Acne

The cause of acne is not fully understood. Though stress can aggravate acne, it clearly does not cause it.

Bacteria Hormones Pollution
