TATOO REMOVAL

What is TATOO REMOVAL ?

Tattoo removal is a procedure done to remove an unwanted tattoo. There are various common methods for tattoo removal include laser surgery, surgical removal and dermabrasion. Tattoo ink is placed beneath the top layer of skin. When it comes to tattoo removal, it is a medical procedure and the lasers used in the removal process can do serious harm when put in the wrong, inexperienced hands. Two of the newer removal options include PicoSure and Pico Way. PicoSure is one of the most advanced laser technologies for the removal of tattoos.

How many sessions will be required ?

It depends upon the size and type of Tattoo. But mostly numerous of treatments are required for the complete result.

Will there be any side effects ?

There are no side effects. Immediately after laser treatment, a slightly elevated, white discoloration with or without the presence of punctuate bleeding is often observed in the treated area which will go away in one or two weeks.
